Forasmuch then as we are the offspring of God, we ought not to think that the Godhead is like unto gold, or silver, or stone, graven by art and man's device. – Acts 17:29

Nearly everyone just "knows" that if enough monkeys were allowed to pound away at typewriters for enough time, they would eventually produce all the great works of literature. But there are some fundamental laws of science and some very simple common-sense facts that show this claim to be nonsense.

Perhaps after a day or two some monkey might type the word "to" with spaces before and after it. Eventually another monkey might type the word "be." Given sufficient time and monkeys, we might end up with "To be or not to be." By this simple, mindless chance typing of letters we could eventually get all the great works of literature.

The truth is, time works against our fearless troupe of innumerable monkeys. If they are going to get their work done, they have to get their job done in a hurry. Neither monkeys nor typewriters last forever. Then there is the problem of paper. Someone has calculated that even if monkeys and typewriters lasted forever and there was an unlimited supply of paper, the worthless trash our monkeys would produce would fill the entire universe before they could get out one Shakespeare play – not to mention War and Peace!

Neither science nor the laws of probability support this nonsensical theory about monkeys. Common sense shows us that this illustration, often used by evolutionists, reveals the anti-scientific nature of evolution. The Bible isn't against science. Evolution is antiscientific!
