

CREATION MOMENTS

Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

Bees Outsmart Scientists

Read Psalm 19:9-10

Scientists have long recognized that bees are intelligent creatures. At the same time, they believe that this intelligence is the product of millions of years of natural selection. The extremely fast learning ability of the bee either puts in doubt the millions of years or shows the hand of the Creator.

Researchers at Princeton University decided to find out whether bees were smart enough to find their food source if it was moved. The researchers moved the prime food source 50 meters farther away from the hive. They found that it took the bees less than one minute to locate the moved source. Being precise scientists, they then moved the food source another fifty meters away. The bees still took less than a minute to find the food source. Two more moves, each a precise 50 meters, produced the same results.

However, the bees had also been studying the researchers. Before the researchers could finish moving the food source yet another fifty meters, they found that the bees had discovered the pattern and were already waiting at the new location!

God is our Creator, and He has cleverly left the evidence of His handiwork – His fingerprints – in the creation itself. For those who have eyes to see, this fills us with wonder and, yes, with love for the Creator God who first loved us.

Prayer: Dear Father in heaven, help me to have eyes which not only see Your creation so clearly that I can discern Your fingerprints, but so I can also clearly see what You are teaching me in Your Holy Word. In Jesus' Name. Amen.
