*Proclaiming Evidence for Truth*

## THIS WEEK'S CREATION MOMENT

### Creation Makes Better Science

*Read Psalm 111:10*

Many people have been taught that evolution is science and creation is religion. However, the origins debate is really a debate between two religions. According to the evolutionist's own rules of science, evolution is not good science. Consider the claims of evolution in view of what science knows today.

Life has never been seen to develop from nonliving materials. Yet, evolutionists say it did.

Mutations, said by evolutionists to have created all the kinds of living things, have never been seen to produce one creature that was more complex or better able to survive. The moon has moonquakes, a magnetic field and internal heat. These are all indications that it is far younger than evolutionists care to believe. Geological strata were at one time sediments in water – floodwaters. Evolutionists believe that the multiple layers of sedimentary rock were laid down one after another by local floods with millions of years between each flood. If that is true, how is it that these strata are often found showing the lower strata blending into the strata above it?

If language evolved, why are the most ancient languages the most complex? If religions evolved, why do the most ancient forms of religion worship one God – a Creator – while later forms of the same religions have many gods – gods who are much more like human beings?

Many more examples show that only the Bible's account of history makes sense in view of what we know.

**Prayer:** Dear Lord, the very stones cry out that You are indeed Creator and Almighty God. Help me to add my voice to this witness and tell others of Your forgiving love in Jesus Christ. In His Name. Amen.
